Education

National University of Science and Technology, Islamabad

Bachelor's in computer science

Expected: 2025

Skills

Languages: JavaScript, HTML, CSS, Python, C++, C#, Java, PHP, SQL

Web Development: MERN Stack (MongoDB, Express.js, React, Node.js), Django, Bootstrap

Technologies: Git, MySQL, MongoDB, Docker

Machine Learning: CNN, RCNN, RNN, GANS, Transformers, Transfer Learning

Experience

Machine Learning Fellowship, ByteWise Limited, Lahore

Jun 2024 – Aug 2024

- Enhanced PyTorch skills and engineered a CNN-based visual classification project, achieving 94% accuracy.
- Attained 97% accuracy in spam detection using scikit-learn, with pandas and NumPy for data handling on datasets like PakWheels.
- Optimized model performance and developed efficient data pipelines, reducing data preprocessing time by 30%.

Game Developer Intern, Mindstorm studios, Lahore

Jun 2023 - Aug 2023

- Developed a tower defense game in Unity, integrating 10 unique shaders with C# and HLSL, enhancing the visual quality and gameplay experience.
- Optimized rendering performance to achieve a consistent frame rate of 60 FPS across various devices.

Projects:

Portfolio | React | JavaScript | EmailJS

- Developed a responsive portfolio website using React, HTML, CSS, and JavaScript, deployed via GitHub Pages, featuring an integrated contact form with EmailJS for seamless communication.
- Achieved 100% responsiveness, Ensuring compatibility across various devices and screen sizes.

To-Do App | React | Django | PyTorch

- Developed a task management application using React with Vite for the frontend and Django for the backend, enabling users to efficiently manage over 200 tasks without performance issues.
- Achieved **30% faster task rendering times** with Django compared to other frameworks during testing, enhancing the overall user experience.

DL Visual Q/A | GANS | Pandas | PyTorch | Flask

- Achieved 57% validation accuracy with the Inception_v3 model, outperforming ResNet18 and ResNet50 by 10% and 7% respectively, while implementing a custom dataset class that improved data processing efficiency by 20%.
- Developed a web interface allowing for video, image, and text input, enabling the model to process inputs 30% faster compared to the Google Colab implementation.

Notes App | React | Django | REST Framework

- Built a full-stack React-Django application for comprehensive note management, including creation, updating, deletion, and listing based on the most recent update.
- Utilized Django for backend database operations and React for a responsive, interactive front-end, achieving 20% faster development compared to using Node.js.

Weather App | JavaScript | OpenWeatherAPI

- Developed a JavaScript application using the OpenWeather API to fetch real-time weather data, including temperature, wind speed, and humidity for over 1,000 cities.
- Achieved a response time of under 2 seconds for API calls, ensuring a smooth user experience during data retrieval.
